

Orthodontics

The benefits of a beautiful smile need no explanation. Here at Waterford Dental, we offer a full range of tooth straightening options for both adults and children.

To complement our general and family dental care, we have a specialist orthodontist on the team who leads on teeth-straightening. We like to see children and young people at the optimum time, to harness the growth that is already taking place. Don't hesitate to make an appointment to get an opinion if you think your child might need treatment.

Many of our patients today are adults. Thankfully, times have moved on from the days of big bulky braces and more and more adults are choosing to have their teeth straightened with discreet, invisible braces. Tooth straightening can often be the first step in a smile makeover. Once your teeth have been aligned, they can be whitened and minimally reshaped too.

Every patient is different and that's why we offer a free initial consultation. You will have time to ask questions and be given options for your treatment. These range from traditional braces to more discreet choices, such as lingual (behind the teeth) braces and Invisalign. We also offer short-term treatments such as Fastbraces. The range of systems here means that you can choose the best option for you and your lifestyle.

Different ways of straightening teeth

Here are a list of the orthodontic systems that we offer at Waterford Dental...

Traditional fixed braces using the latest technology and modern brackets.

Clear aligners which can be removed when eating and cleaning.

Braces work in the same way as conventional system but brackets are placed behind the teeth, making these a more discreet option.

A short-term adult, orthodontic system for minor problems. Great for straightening teeth in time for a big event.
